

Resident Notice

Notice of Private Well Survey / Monitoring Program

Dear Resident:

Cole Engineering Group Ltd. ("COLE") has been retained by the City of Hamilton to conduct a private well survey in your area. The survey is being conducted as part of environmental and engineering studies being carried out in advance of construction of the Dickenson Road Sanitary Trunk Sewer from Upper James Street to Highway 56.

Well Survey

Our field technicians will be conducting a door-to-door private well survey as of July 23, 2020 between 8:00 a.m. and 8:00 p.m. The purpose of the survey is to assess general groundwater resources and usage in your area, and to establish baseline conditions of individual private wells. Your participation in this survey is entirely voluntary. However, your participation is encouraged as it will allow COLE to assess and help protect groundwater resources and groundwater users in your area. If you are not available during the door-to-door survey, please take a few minutes to review the attached well survey form. We ask that you fill out any information that you may have knowledge of, and return the form using the prepaid self-addressed envelope.

Private Well Monitoring

COLE will also be completing background private well water quality monitoring for the Dickenson STS project that will include one (1) round of pre-construction groundwater level and well water quality monitoring at accessible private wells. If you grant permission for water quality sampling to be carried out at your well, COLE representatives will contact you to arrange a time that is convenient for you. COLE will forward a copy of the water quality laboratory results from your well, once received from the laboratory and reviewed by our hydrogeological team. The private well water quality sampling will be conducted at no cost to you. The private well monitoring program is designed to assess general background groundwater quality and quantity in the vicinity of the Dickenson STS project prior to construction. The well owner remains responsible for regular sampling and routine maintenance of their well. Well survey and water quality data collected for your well will not be made available to the general public.

Should you have any questions about the private well survey or well monitoring, please contact Muin Husain at (905) 754-8060 ext. 462, or by email at MHusain@coleengineering.ca. Overall Dickenson STS project-related questions can be directed to Tafeek Ameer at the City of Hamilton at (905) 546-2424 ext. 2818, or by email at Tafeek.Ameer@hamilton.ca. Your time and cooperation are appreciated.

Yours truly,

CITY OF HAMILTON
